

Torsten Teorell 1905 - 1992

**Proceedings from a
Symposium to commemorate
The Life and Scientific Achievements of
TORSTEN TEORELL**

On the 4th of August 1992 professor Torsten Teorell died at the age of 87 after a very active scientific career leading to significant contributions to physiology.

On the 11th of December 1992 the Department of Physiology at Uppsala University arranged a small symposium to commemorate some of Torsten Teorell's extensive scientific work and during this symposium six papers were presented. It has been suggested that these papers may be of general interest and they are therefore now being published.
